MRI (12/20/2024) demonstrates complete loss of articular cartilage in the medial compartment with subchondral bone edema and cystic changes. Patient has failed minimum 6 months of conservative therapy including:

- Physical therapy (16 sessions, 04/2024 - 07/2024) — no sustained improvement
- Oral NSAIDs (meloxicam 15mg daily x 4 months) — discontinued due to GI side effects
- Corticosteroid injection (triamcinolone 40mg, 09/12/2024) — relief lasted <3 weeks
- Hyaluronic acid series (Synvisc-One, 06/2024) — no meaningful improvement
- Activity modification and weight management — BMI reduced from 31.4 to 28.2

Patient reports inability to walk >1 block, difficulty with stairs, and sleep disruption due to pain. KOOS score: 34/100. Functional impairment significantly impacts ADLs and employment (desk work requiring occasional ambulation).
